Connect. Learn. Build. Innovate. Exhibit.

AI for Life • AI for Work • AI for Kids

Welcome to

iBridge Hub 2026

Technology is no longer optional. Artificial intelligence is changing the way people work, learn, create, communicate, design, sell, teach, serve and build.

The better question is now:

How do we use technology and AI wisely, creatively, ethically and productively?

iBridge Hub exists to help answer that question - through learning, workspace, innovation programmes, and community.

Our 2026 Focus

AI for life. AI for work. AI for business. AI for children. AI for creativity. AI for community transformation.

What We Provide

Coworking space, AI learning experiences, Innovation Kitchen, digital literacy for the AI age, children's technology exposure and exhibitions.

We are evolving **at iBridge Hub**

iBridge Hub began as a place for technology, entrepreneurship, coworking, digital literacy and innovation. In 2026, we are evolving into a broader platform for AI-powered learning, creativity, productivity and enterprise.

We are moving from:

- technology awareness to technology application
- isolated ideas to collaborative innovation
- learning tools to building solutions
- fear of the future to practical participation

The future should not simply happen to us.

We must learn, prepare, participate and build.

What
iBridge Hub Does

AI Learning & Practical Training

Hands-on learning for people, teams, schools and organisations.

Innovation Kitchen

Idea-to-impact sessions that turn raw possibilities into useful solutions.

Coworking & Enterprise Space

A productive environment for individuals, startups and teams.

Digital Literacy for the AI Age

Foundational digital skills upgraded for AI, safety, productivity and creativity.

Exhibitions, Events & Community

AI Saturdays, AI for Kids, demo days, conversations and showcases.

Connect. Learn. Build. Innovate. Exhibit.

AI
at iBridge Hub

Artificial intelligence is changing how people write, research, design, analyse information, generate ideas, serve customers, plan events, manage businesses, teach, learn and create.

At iBridge Hub, we are not interested in hype. We are interested in helping real people use real tools to solve real problems.

Participants learn to:

- understand what AI is and what it is not
- use AI tools for productivity and creativity
- write better documents, proposals and content
- improve research, planning and decisions
- build simple AI-assisted workflows
- use AI responsibly and ethically

AI Saturdays

AI Saturdays introduces people to artificial intelligence in a friendly, hands-on and community-centred way.

Each session helps participants learn one useful thing, practise it, and leave with something they can immediately apply.

- AI for beginners
- AI for writing and communication
- AI for business owners
- AI for students and research
- AI for content creation
- AI for social media and marketing
- AI for teachers and schools
- AI for churches and nonprofits
- AI for events, administration and operations

Format

Short teaching. Live demonstration. Guided practice. Q&A.; Real-life application.

Learn it. Try it. Use it. Build with it.

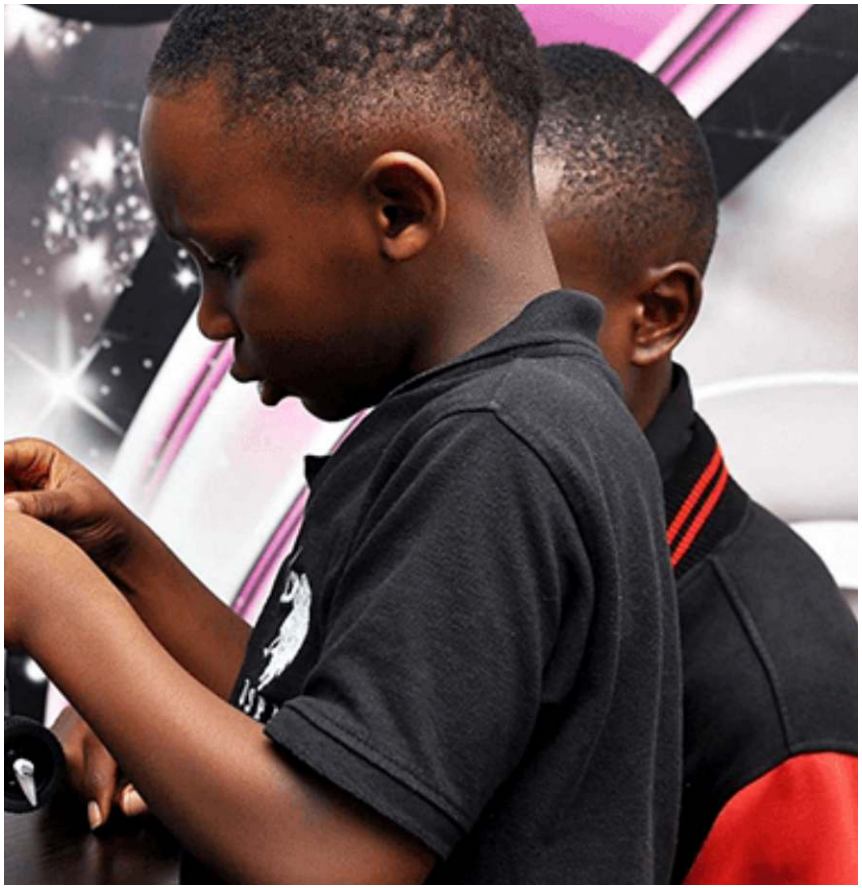

AI
for Kids

Children are growing up in a world where AI will shape how they learn, create, play, solve problems and prepare for the future.

The goal is not to make children dependent on machines. The goal is to help them become curious, creative, thoughtful and future-ready.

Children explore:

- creative thinking
- digital storytelling
- simple prompting
- visual imagination
- coding concepts
- robotics and problem-solving
- responsible technology use
- teamwork and presentation
- small projects

AI

Ideas Lab

Many people have ideas but do not know how to shape them. Others have problems but do not know where to start.

The AI Ideas Lab helps participants use AI as a thinking partner to explore opportunities, structure thinking and move from vague ideas to clearer concepts.

- business ideas
- product and service ideas
- education tools
- content projects
- community solutions
- youth projects
- social impact ideas
- local problems that need creative solutions

Think

What problem are we solving?

Shape

Who are we solving it for?

Test

What can we build simply?

Exhibit

What can we show and improve?

Innovation

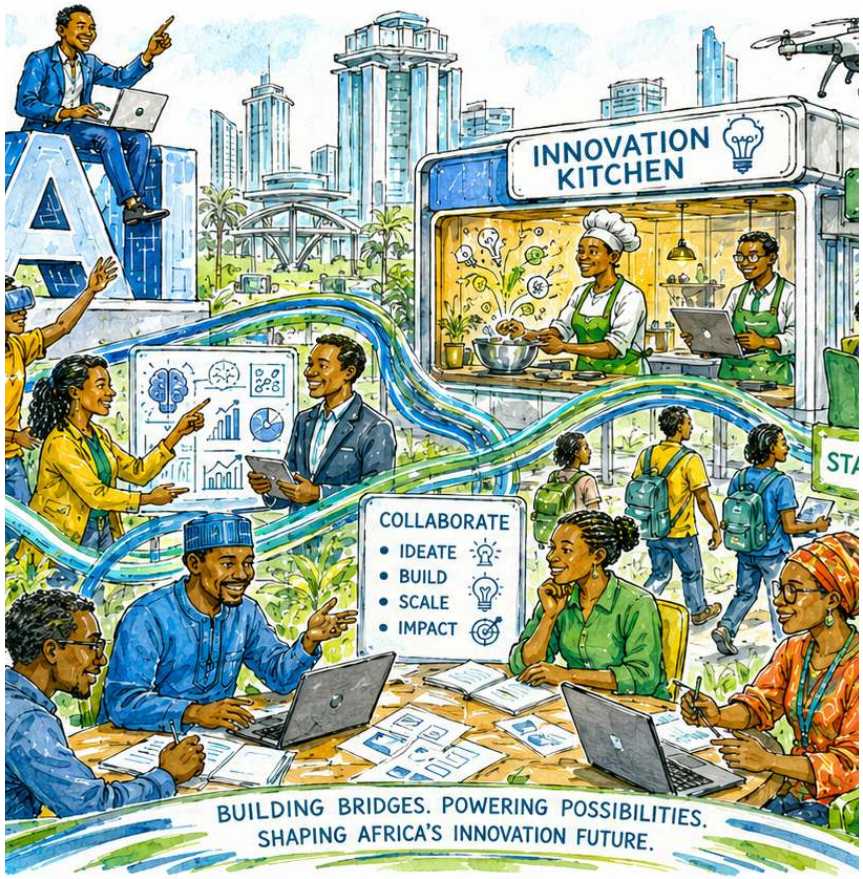

Kitchen 2026

Innovation Kitchen is our idea-to-impact platform for entrepreneurs, creators, professionals, students, organisations and problem-solvers.

In a kitchen, raw ingredients become useful meals. At Innovation Kitchen, raw ideas become useful solutions.

We help participants move beyond excitement into clarity, usefulness, value and execution.

- market-creating ideas
- local problem-solving
- design thinking
- business model development
- customer understanding
- AI-assisted innovation
- prototype development

Innovation Kitchen

Innovation Kitchen sessions bring together entrepreneurs, professionals, creators, students, business owners, technologists, designers, educators and community leaders.

The question is always:
What can we build that makes life, work, business, learning or community better?

- idea discovery
- problem framing
- AI-assisted research
- market opportunity mapping
- business model design
- prototype thinking
- pitch development
- demo and feedback sessions

Digital Literacy
for the AI Age

In the past, digital literacy meant using computers, smartphones, email, internet search and basic productivity tools.

Today, it must also include AI, online safety, digital creativity, data awareness, content creation, collaboration tools and responsible technology use.

- basic computer and smartphone productivity
- online communication and collaboration
- documents, spreadsheets and presentations
- internet research and fact-checking
- digital content creation
- AI-assisted writing and planning
- safe and responsible online behaviour
- tools for business, schools and everyday life

From STEM

to STEAM + AI

STEM remains important, but the future is also creativity, design, communication, entrepreneurship, ethics and artificial intelligence.

We want children and young people to become thinkers, builders, creators and problem-solvers.

The goal is not just to teach subjects. The goal is to prepare future-ready people.

Science
curiosity and discovery

Mathematics
logic, data and patterns

Technology
tools and systems

AI
prompting and automation

Engineering
building and testing

Enterprise
value creation and service

Arts
design and imagination

iBridge Hub

Innovation Labs

Use What Exists

Innovation can mean using available tools in smarter ways.

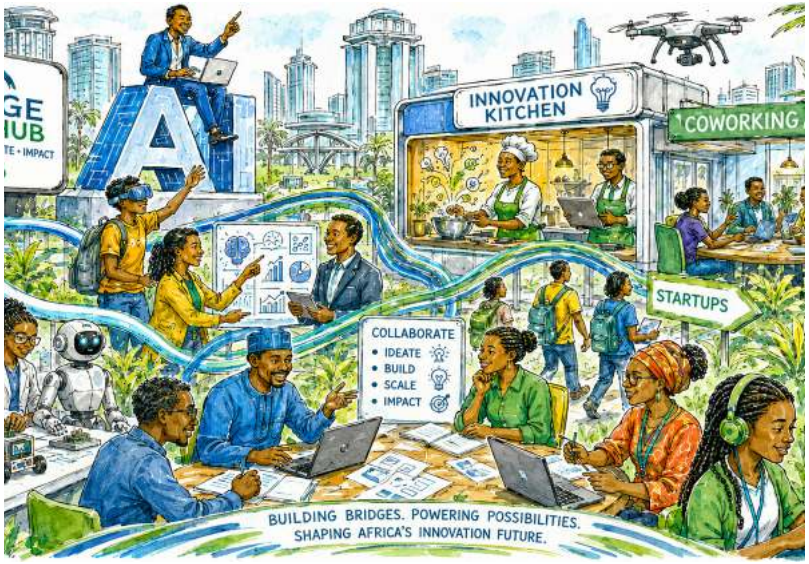

Start With the Problem

We begin with the issue, need, pain point or opportunity.

Build for Real People

Technology must be useful, understandable, affordable and relevant.

AI
Exhibition

The iBridge Hub AI Exhibition will bring together children, students, entrepreneurs, creators, professionals, schools, teams, organisations and innovators to demonstrate practical uses of AI.

It is designed to move people from fear to curiosity, from curiosity to practice, and from practice to possibility.

- AI for Kids projects
- student creativity and learning
- AI-assisted business ideas
- Innovation Kitchen prototypes
- digital storytelling
- AI-generated design and content
- productivity workflows
- education tools
- local problem-solving ideas
- talks, demos and showcases

Coworking
at iBridge Hub

iBridge Hub remains a productive workspace for entrepreneurs, freelancers, consultants, remote workers, creators, professionals, startups and teams.

Workspace is not just about tables and chairs. It is about environment, community, access, productivity and collaboration.

- Flex Desk
- Resident Desk
- Team Space
- Large Team Space
- Meeting and collaboration support
- Access to a practical innovation environment

www.ibridgehub.com | ibridgehub@gmail.com | +234 703 732 5246

Coworking
Packages

Flex Desk
₦5,000 / day

For flexible access and occasional use.

Resident Desk
₦50,000 / month

For a regular work base and focused environment.

For small teams, startups and entrepreneurs.

Large Team Space
₦180,000 / month

For growing teams needing more room.

All packages are designed for entrepreneurs, professionals, creators, startups and growing teams who need a productive workspace with internet access and a collaborative environment.

You have a space
at iBridge Hub

iBridge Hub is a place for people with ideas to meet, connect, learn, work, build and grow.

It is for people who believe that African cities, African businesses, African schools, African children and African communities must not be left behind.

At iBridge Hub, people, technology, business, learning and innovation meet.

- a child learning AI for the first time
- a business owner discovering productivity tools
- a student building a project
- a creator developing content
- a team finding a space to work
- an entrepreneur testing an idea

Our **Principles**

The values that shape iBridge Hub.

1. **Access**
   Technology should not be reserved for a few people.

2. **Usefulness**
   Technology must solve real problems.

3. **Creativity**
   Ideas need the right environment, exposure and encouragement.

4. **Responsibility**
   AI and technology must be used wisely and ethically.

5. **Collaboration**
   The future is not built alone.

6. **Local Relevance**
   Global tools must be translated into local solutions.

7. **Impact**
   Our goal is to build people and create solutions that matter.
